

## ENHANCED LEARNING FEATURES

### Performance Reporting

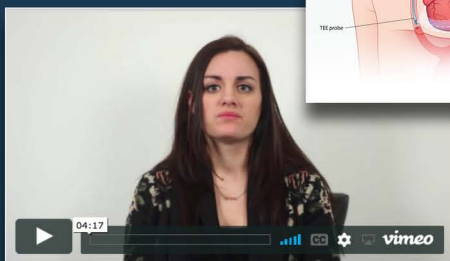

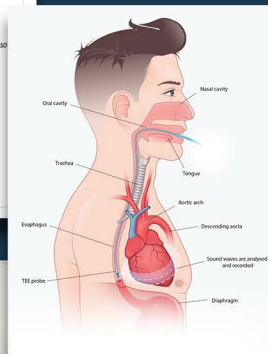

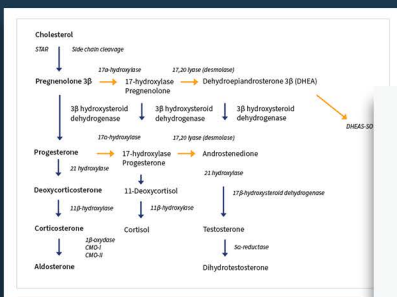

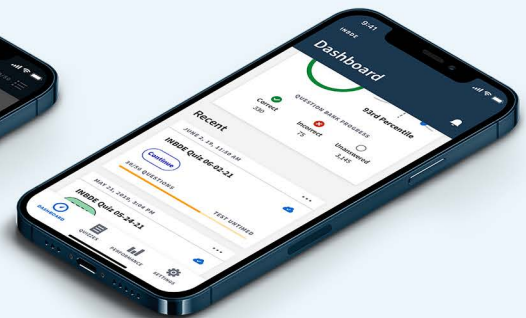

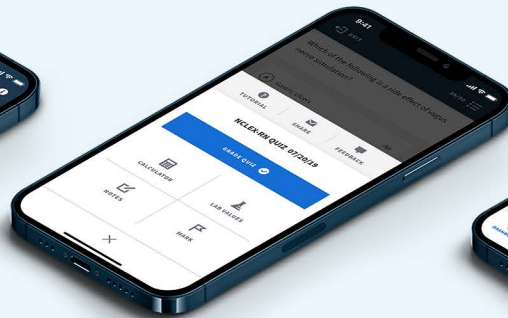

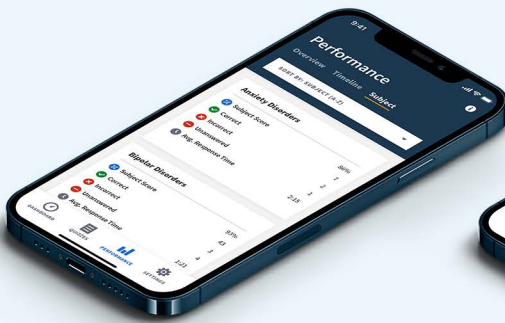

Track performance by subject area, peer rank, and average response time to effectively gauge exam readiness and stay on top of performance progress throughout the term.

### Customizable Study Tools

Simulate exam conditions, refine key concepts, or review questions in a computer-adaptive setting with a range of customizable test modes and timing options.

### 24-Hour Access

All in-app and online features automatically sync between devices, so students can access downloaded quizzes and assignments wherever and whenever it's most convenient.

## SUPPORTS ALL MEDIA TYPES:

EXIT

A 19-year-old female is admitted with a 5-week history of myalgia, weight loss, and night sweats. Over the past 4 weeks, she started to become breathless. On physical examination, she has a temperature of 38.1°C (100.6°F). Auscultation of the precordium reveals an early diastolic murmur at the left lower sternal edge. The fundoscopic examination is shown below. Examination of her chest, abdomen, and central nervous system is normal. Which investigation should be performed to confirm the suspected diagnosis?

REMOVE HIGHLIGHT

A Serum complement level -Aa

B Serology for bacteria -Aa

C Serum ANCA -Aa
